

Claire Tomaszewski was a precious, happy, perfectly healthy little girl at age 2. She had a mild ear infection and upset stomach with typical kid stuff symptoms on a Wednesday and died only two hours after kissing her daddy good bye for work on Friday morning, October 24, 2003. Her cause of death remains unexplained and has been categorized as SUDC (Sudden Unexplained Death in Childhood).

In June 2006, Claire's father and a friend, created Claire's Ride for A Reason. The event was a cross-country bike tour from San Diego, CA to Hackensack, NJ - connecting the site of the research hospital to the home of the SUDC Program.

Claire's Ride for A Reason is an annual cycling event to raise awareness and to support research for the SUDC Program.

Sudden Unexplained Death in Childhood (SUDC)

The SUDC Program was created in September 2001 as part of the CJ Foundation for SIDS. It was developed to provide a centralized resource for information, support, research and advocacy. It serves families and professionals effected by the tragedy of SUDC and promotes awareness of SUDC in communities across the country.

SUDC Fast Facts

- SUDC occurs in children beyond the age of twelve months.
- The cause of death remains unexplained after a thorough investigation and autopsy.
- SUDC is a diagnosis of exclusion, when other causes of death are not identified.
- SUDC incidence is approximately 1 death per 100,000 children.
- Incidence of SIDS (Sudden Infant Death Syndrome) is 50 times greater.
